

The Moon during the day

Observation sheet · four visits to the sky

- 1 Choose an open daytime view, away from the Sun.
- 2 Record whether you found the Moon and its rough visible shape.
- 3 Try a similar time on several days. You may not find it each time.

Use unaided eyes only. Do not look at the Sun. Do not use binoculars or a telescope.

“Not found” does not show that the Moon vanished or was below the horizon. Clouds, buildings or a bright sky may hide it.

Date / local time	Place / sky and weather
Moon: visible / not found (circle one)	
Visible shape or sketch	What remains uncertain?
